

Sectum AI - Verification Evidence Pack

Run run-sectum-ai-demo-2026

Verification summary

Run started: 2026-06-15T16:59:06.073964+00:00

Run finished: 2026-06-15T16:59:07.780009+00:00

Findings recorded: 343

Confirmed cross-tenant findings: 325

Retrieval-Pivot Rate: 81.2% (95% CI 68.1%-89.8%, n=48)

Scope and methodology

Sectum AI provisions synthetic tenants seeded with cryptographic canary markers, recorded in a hashed ground-truth manifest. Probes run from each tenant's session against the configured surfaces; this pack attests the isolation of those surfaces under the run's scenario.

Each observation passes a layered detector - exact canary match, then semantic similarity, then a calibrated judge. A confirmed finding is a marker owned by one tenant observed in another, traceable to the manifest, so confirmed findings carry no false positives; a candidate that cannot be tied to a manifest marker is recorded as unverified rather than confirmed.

Scope is limited to the probes and surfaces exercised in this run, against the test condition fixed by the manifest hash below. Sectum verifies and attests; it does not remediate - findings carry remediation pointers, not changes - and this pack asserts test coverage, not legal certification.

Compliance control coverage

SOC 2 (TSC) (CC6.1, CC6.6, CC6.7): Tenant logical separation tested by benign and adversarial probing across the AI surfaces.

ISO/IEC 27001:2022 (A.5.15, A.8.3, A.8.12): Cross-tenant information leakage tested; residual leakage itemized.

ISO/IEC 42001:2023 (A.6.2.6, A.7.2, A.7.5): Per-tenant data management and provenance in the AI system tested; isolation verified under AI system operation and monitoring.

GDPR (Article 17, Article 25, Article 32): Erasure across the AI surfaces verified; tenant isolation tested.

CCPA/CPRA (1798.105, 1798.100, 1798.150): Deletion of a consumer's personal information across the AI surfaces verified; segregation of consumer data tested.

EU AI Act (Article 15): Robustness of tenant isolation tested under benign and adversarial conditions.

HIPAA (164.312(a)(1), 164.312(c)(1), 164.312(e)(1)): Segregation of regulated tenant data verified across the AI surfaces.

NIST AI RMF (MEASURE 2.7, MANAGE 2.x): Documented measurement of multi-tenant security risk.

OWASP LLM Top 10 (LLM08:2025): Direct test coverage of vector and embedding multi-tenant weaknesses.

These control mappings assert that Sectum AI produced test-coverage evidence for the named controls. They are not a legal certification of compliance and do not substitute for an audit or a Data Protection Impact Assessment.

Integrity and independent verification

Run digest (SHA-256, run identifier):

b8cf8660c1866d21609045438391b729f308292a965e4fb09c75572a3d4ab93b

Manifest hash: b8236a0e14d14c15fe2e6206e17fe4008f9f3c89992ee9eb25345259431b1c27

Verify this pack independently by running 'sectum-ai verify' on it. That recomputes the whole-pack attested digest - over the run record, the manifest hash, the control mappings, and the PDF reference - and checks it against the timestamp token (and the Rekor inclusion proof when present). The run digest above is the run's identifier, not the value checked against the token; any edit to the attested content changes the attested digest and fails verification.
