Sectum AI - Verification Evidence Pack

Run run-sectum-ai-demo-2026

Verification summary

Run started: 2026-10-17T17:28:52.516219+00:00

Run finished: 2026-10-17T17:28:54.801097+00:00

Probes exercised: 12: agent-framework-hijack, agent-tool-hijack, embedding-inversion, ikea-extraction, kv-cache-timing, lora-cross-tenant, memory-contamination, rag-entity-bleed, rag-pipeline-bleed, rag-poisoning, semantic-cache-contamination, tenant-boundary-fetch

Findings recorded: 367

Confirmed findings: 325 (cross-tenant 325; on live surfaces 0)

Retrieval-Pivot Rate: 81.2% (95% CI 68.1%-89.8%, n=48)

Scope and methodology

Surface provenance: NO live backend was configured. Every surface in this run (agent_framework, agent_memory, mcp, model_adapter, rag_pipeline, semantic_cache, vector_db) was Sectum's built-in synthetic store, so the findings, metrics, and any clean result below describe that synthetic stack and NOT a production system. This pack is a demonstration, not an attestation.

Sectum AI provisions synthetic tenants seeded with cryptographic canary markers, recorded in a hashed ground-truth manifest. Probes run from each tenant's session against the configured surfaces; this pack records what those probes observed on the stack named above, which is not a production system.

Each observation passes a layered detector - exact canary match, then an OFFLINE similarity stage - this run configured no embedding model, so the second tier was Sectum's hashing vector, which measures lexical overlap rather than meaning, then an OFFLINE adjudication stage - this run configured no judge, so the third tier was Sectum's token-order string matcher, which is not a calibrated judge. The semantic tier admitted a candidate at a similarity of 0.62 or above. A paraphrase an offline stage cannot see is not reported as absent - it is not reported at all; configure `detection.embedder` and `detection.judge` to exercise the semantic tiers. Confirmation requires the observed content to trace back to a specific marker in the ground-truth manifest, so a candidate that cannot be tied to a manifest marker is recorded as unverified rather than confirmed. Confirmed findings are therefore manifest-grounded - they are not asserted to be free of error, and this pack does not rate their exploitability. Not every confirmed finding in this pack rests on a manifest marker: kv-cache-timing, lora-cross-tenant confirm on a different basis - a statistical timing result, or a routing assertion about which tenant's weights served an inference - and those rows are rendered with 'marker n/a'. The manifest-grounding rule above governs the content-matching classes; it does not describe these.

Scope is limited to the probes and surfaces exercised in this run, against the test condition fixed by the manifest hash below. Sectum verifies and attests; it does not remediate - findings carry remediation pointers, not changes - and this pack asserts test coverage, not legal certification.

Findings

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00000 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-UURK6HUSUBK7RGQ42MLR2ZMN5U"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00000 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-UURK6HUSUBK7RGQ42MLR2ZMN5U"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00000 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-UURK6HUSUBK7RGQ42MLR2ZMN5U"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00001 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-JOUKVHXJL6MBKBRW6R4OVBQSEI"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00001 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-JOUKVHXJL6MBKBRW6R4OVBQSEI"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00001 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-JOUKVHXJL6MBKBRW6R4OVBQSEI"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00006 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-2GXYRWGZ6GPBR2FGO3SOW7KUNY"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00006 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-2GXYRWGZ6GPBR2FGO3SOW7KUNY"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00006 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-2GXYRWGZ6GPBR2FGO3SOW7KUNY"

[synthetic surface - Sectum's built-in fake, not your stack] **critical** - tenant-boundary-fetch on vector_db: marker mkr-00007 (confirmed) [OWASP LLM08:2025 (secondary: LLM02:2025); ATLAS AML.T0024; NIST MEASURE 2.7]

Evidence: "SECTUM-CANARY-MDXVWQ5NXEZ3PQBYBAUU5UTDDI"

Compliance control coverage

No control mappings were recorded.

These control mappings assert that Sectum AI produced test-coverage evidence for the named controls. They are not a legal certification of compliance and do not substitute for an audit or a Data Protection Impact Assessment.

Integrity and independent verification

Run digest (SHA-256, run identifier):
4b1278790d81fd4a9720299c863ace70c0621cb8d04bdcf2699f418fd170f66c

Manifest hash: 07cbe06c1355fa3f01d3cd720d4dd1c453ec5d91965d53f694282a45463b26a6

Verify this pack independently by running 'sectum-ai verify' on it. That recomputes the whole-pack attested digest - over the run record, the manifest hash, the control mappings, the PDF reference, and the two anchor flags - and checks it against the timestamp token (and the Rekor inclusion proof when present). The run digest above is the run's identifier, not the value checked against the token; any edit to the attested content changes the attested digest and fails verification.

Independent anchor: NONE. This pack's timestamp is Sectum's local development token - reproducible by anyone over any digest, so it binds the content but is not independent evidence of when, or by whom, it was produced. Verification of this pack is integrity-only and 'sectum-ai verify' requires --allow-unanchored to complete; without it the run above exits 4 on [FAIL] independent-anchor, which is a statement about the anchor and not about the content. Re-create the pack with 'report --tsa' and/or '--rekor' for a pack whose tamper evidence stands on its own. No surface in this run was live, so 'sectum-ai verify' also requires --allow-synthetic to complete; without it the run exits 4 on [FAIL] run-scope, which is a statement about what was in scope and not about the content.
